

*Electronic signature*

## Mobile

Leverage mobile devices to serve your business.

## Secure

Protect sensitive data with Samsung Knox™.

## Lightweight

Easily deploy e-signatures in your organization.

### Improve Client Experience With Paperless Processes

Equipping your client-facing staff with innovative mobile tools gives your business a clear competitive advantage and a measurable value.

Your clients can sign legally binding documents wherever they prefer - at the point of sale or at a remote location. Signatus works smoothly even when connectivity is unavailable.

### Collect and Safeguard All Important Data

Signatus captures all customer data needed for complete onboarding, including signatures, pictures, ID scans, and GPS coordinates.

This information adds evidential weight that eliminates the risk of signature repudiation ensuring legal compliance and enforceability of e-signed documents.

### Replace Old-Fashioned Signature Solutions

Samsung mobile device with Signatus replaces entire stack of hardware (PC, signpad, scanner, printer) and software traditionally used for e-signing.

Knox™ Configure turns devices into secure single-purpose tools usable even in low-trust environments such as couriers, intermediaries or temporary workers.

## Use Cases

Signatus fits all use cases where the workflow requires mediated (face-to-face) signing of documents — at a branch office, at the customer's doorstep, or anywhere on the go.

A leading **consumer credit provider** uses Signatus to obtain client signatures on credit contracts at third-party retail locations. Pictures of client IDs and proof of income captured by tablet camera accompany the signed contracts.

**Private wealth advisors** use Signatus to perform non-cash banking and investment operations with affluent clients wherever and whenever they prefer.

**A telecom operator** uses Signatus to sign onboarding documents delivered to the customers' doors by couriers using secured mobile devices. Telco services are activated or upgraded minutes after signatures are obtained without having to send paper documents for scanning and archiving.

**Mobile sales reps** use Signatus to close contracts directly at customer locations, saving time and eliminating physical paperwork.

## Benefits For Your Business

### Time Savings and Increased Productivity

Signatus enables faster service and measurably increases customer satisfaction.

By making manual paper handling unnecessary, our technology saves resources and frees up more time to spend with customers.

### Fewer Errors and No Lost Documents

The business logic checks embedded in the Signatus workflow eliminate incomplete or inaccurate documents.

The fully digital lifecycle of documents prevents loss and facilitates long-term archiving and retrieval.

### Ultimate Customer Experience

Handwritten signatures are the most intuitive and user-friendly way of expressing one's consent.

Fully customizable user interface of Signatus enables personalized workflows and provides a seamless user experience.

## Standards

### Legal

The Signatus solution is built on standards fully compliant with EU legislation (eIDAS, GDPR) and local or industry-specific regulations.

In connection with a Trust Service Provider Signatus can be supported by qualified signatures, timestamps or seals.

### Authenticity and Integrity

Signatus collects unique dynamic characteristics of handwritten signatures (biometry) that link the signatory to the document content.

Data captured by Signatus is hashed and encrypted within the PDF to provide proof of authenticity. Digital signature technology detects any attempts to alter signed documents.

### Integration

Standard connectors for document retrieval and upload (REST, CMIS, web) make Signatus easy to link with any applications that fulfill business-process objectives.

Our partner-friendly approach provides multiple ways of integrating Signatus with other apps, platforms, solutions.
